Find the money, delays and risk hiding between your systems. Without replacing them.

VEPICT is a data and analytics platform with expert implementation that connects your ERP, CRM, EHR and operational systems and uses AI to show where to act.

- **One connected view of your business. Ask a question, get a governed answer in seconds.**
- **From disconnected data to board-ready answers in weeks.**

The problem

Each system reports on itself. The losses sit between them: work delivered and never billed, one supplier under five names, an approval step every case waits on. Teams spend days assembling reports that still disagree.

What VEPICT does

See

Connects your systems, resolves the same customer, supplier, patient or asset into one record, and gives every measure one definition.

Understand

Measures the process behind each outcome and shows the step, team, supplier or lane where time and money are lost.

Act

Forecasts what happens next, recommends the plan, and answers executives' questions in plain language from governed data.

What it has found

$3–4M
unbilled revenue identified at a county health department by joining EHR and billing data.

4–8 weeks
typical time to first insights on your own data, starting with one business question.

28
industry sectors with mapped KPIs and process indicators, from government to manufacturing.

Eight capabilities, one platform

- **Data integration and management** — connectors, modeling, lineage
- **AI and predictive analytics** — models, monitoring, Ask
- **Business intelligence and dashboards** — role-based, real time
- **Process intelligence** — cycle times, bottlenecks, alerts
- **Workforce and resource analytics** — capacity against demand
- **Data governance and quality** — ownership, quality gates, audit
- **Organizational knowledge graph** — hidden links and concentrations
- **Planning, forecasting and optimization** — scenarios, recommended plans

Timeline

WEEK 0
20-minute briefing: your question and your systems.

WEEKS 1–2
Discovery: one use case, its data and success measure; fixed quote.

WEEKS 2–6
Connect and model: connectors, entity resolution, definitions.

WEEKS 4–8
First insights: dashboards and findings reviewed with your team.

What your team puts in

ROLE	RESPONSIBILITY	TYPICAL TIME
Executive sponsor	Owns the question, unblocks access, joins the findings review	About 1 hour a week
Business owner	Defines measures and targets, validates results	2–4 hours a week
IT or data contact	Grants read access, approves connections	4–8 hours a week in weeks 1–4, then about 2
Subject-matter experts	Explain how the process really runs	Two or three 60-minute workshops

Pricing approach

- **Platform subscription**: a percentage of annual revenue, or outcome-based on data processed (GB) — you choose.
- **Implementation**: scoped in discovery and quoted per use case.

Security and AI governance

- Controls documented against NIST SP 800-53 Rev. 5; designed for HIPAA, HITECH and GDPR
- Deploy in our cloud, your AWS, Azure or Google Cloud account, hybrid or on-premises, in the region you choose
- AI sees only what the user may see; your policy blocks PHI, PCI and other tags; no training on your data
- Hash-chained audit of every question, query and change; AI actions wait for approval

Systems VEPICT connects to

SAP S/4HANA and ECC · Oracle E-Business Suite, Fusion and NetSuite · Microsoft Dynamics 365 · Epic · Oracle Health (Cerner) · Infor · Workday · Salesforce · ServiceNow · UKG / Kronos · Snowflake · Databricks · SQL Server · Oracle Database · PostgreSQL · MySQL · BigQuery · Redshift · REST and SOAP APIs · HL7 and FHIR · IoT and historians · Excel, CSV and files.

Where to start

Pick the one question that costs you most — revenue leakage, a process that waits, staffing against demand, supplier spend — and the two or three systems that hold its data.
